He also explained the benefit and uses of dung beetles.

Dr. Yogesh Shouche, Senior Scientist, NCCS Pune. He delivered a speech on "Me they and us: what genomic studies tell us about ourselves". In his speech he gave an insight about how the microbes interact with each other in natural ecosystem & in turn with their hosts. He also spoke about the association of microbes with our own body in many physiological disorders and even mental health.

Dr. Sanjay Sawant, Principal of Kashibai Nawale College of Pharmacy, Khondwa, Pune. His presentation was on "Life Science, Drug discovery and Development". His talk and presentation included an overview of the pharmaceutical industry in the drug discovery process and how advents of the life sciences are being utilized in the drug discovery. His presentation also illustrated the drug discovery and development is a very complex, long term, high risk and high cost knowledge driven multidisplinary process which aims to provide therapeutic benefits to patients through suitable formulation.

Dr. D.K. Mhaske, BOS Chairman of Zoology, SPPU, Pune. He delivered a speech on Advances in Biochemical Techniques. In His Talk he covered all the aspects of interdisplinary technology where knowledge, method and expertise are required from chemistry, biochemistry, microbiology, genetic, chemical engineering and computer sciences. He explained how the biochemistry branch of science explores chemical process that takes place inside all living things from bacteria to plant and animals. He also illustrated that biochemistry is laboratory based science that brings together biology and chemistry, by using chemical knowledge and techniques to help understand and solve biological problems.

Dr. Kiran Randive Asst. Prof., Dept. of Botany, Waghire College. He gave valuable knowledge to the participants on "fungal diversity". Dr.Savita Datar, Head of Zoology, S.P College, Pune. She delivered talk on Shell-less chick embryo- culture as a model for gestational Diabetes. Through her talk she informed that why the simple shell-less chick embryo culture system was developed to study the glucose induced malformation in mammals. In her talk she also illustrated how chick embryo can be cultured outside the egg shell in a glass bowl to study the effect of hyperglycaemic on development visually. She also underlined that this technique is simple and economical and by using this model diabetic malformation of mammalian gestational diabetes can be depicted and this could be also used not only for research purpose but also for the teaching of embryology in schools, colleges and universities.

Dr. S.G.Deshpande, Entomology Section, NCL, Pune. He presented his talk on "Prospects of Botanical pesticides for the future in Integrated Pest Management (IPM).
